                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CHARLES CAN A MARK AND A CAN A
```

```
The present invention relates to innkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. poptides) to carrier vehicles (e.g. polymers, polymers, pionerns) to produce of produce of innking an epitope (e.g. a peptide) to a carrier (e.g. a perten) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or immorpose of the invention describes peptides derived from or immorpose of the coperation or produce conjugated compounds. The compounds or compositions of the invention are used to produce conjugated compounds. The compounds or compositions of the invention of 1gE mediated diseases. The invention of allows for the treatment of 1gE mediated diseases. The invention protein as a set of of only immunogation of a peptide epitope (arrigen) to a protein a protective antibody response in an aliminal or human patient.

O
                                        The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a disturbine bridge cyclised peptide and an immunosynth cartner. The vaccines can be used in the interaction and allergies. The present sequence is a cyclic peptide inclusionen certified from buran immunoglobulin B (IgB) suitable for use in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The prisent invention describes a popular II compility on twolled surface exposed group/epilope [E1] of Chepsilon II do II mannowlebulur E (199), or its minutope. Also become a large in a minutope in the for treating allerly compilette.

recognising ED; (4) a pharmaceutical composition (PC) comprising (UV); (5) a peptide (1a) capable of being recognised by (UV); (6) an immunogen (1a) capable of being recognised by (UV); (6) an immunogen (1a) capable of being recognised by (UV); (6) an immunogen can have antiallergic and immunosupprissive activities, and can be useful in medicine and inthe ranifactors of medicaments for treating and preventing allergies. (IV) its useful for identifying mimotopes of PL, in medicine and also in the manufactoring redicaments for treating allergies. (I) is useful in diagnostics and in the affinity purification of circulating and in ideal and also in diagnostics and in the affinity purification useful for treating about the about (I, (II) and PC are useful in diagnostics and in the affinity purification useful for treating a patient associated to esquences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprising an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The prosent invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles e.g. macronolecules, polymers, dendrimers, proteins) to produce biological and inministrate constructs. The invention provides a method for linking an epilicipe (e.g. a peptide) to a carrier (e.g. a protein) for use in a thainaceutical composition or a vaccine. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide C67/8 derived as mimotope of Cepsilon2 region of human 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human, linkage technology, conjugated compound, carrier vehicle, epitope, Cepsilon2, Cepsilon3, Cepsilon4, immunoglobulin E, 1gE mediated disease, antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 16;

The present satisfies any constitution of the free feet of the present sequence is a system to prove of an evityent from humanoglobulin E (19E) autable to use in the invention
Invention describes peptides derived from or examples of the Cepsilons (Cepsilons). Cepsilons of Americans of the invention are useful in the manufacture of a compositions of the invention are useful in the manufacture of a progression of the invention of allows for the troatment of 196 methaded Sissassa. The invention of allows for out to read conjugation in a peptide might progression and the form and in a manufacture which may be able to the form and the form of the form and the form of the form 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Emminoqeo, humadı iqE, immünoqicolin B, ellerip, Tos. eller sistem ilikade

The present invention relates to conjugates suitable for use in vaccines, where the conjugate compises a disulphade bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a cyclic peptide immunogen derived from human immunogentie. FigE) suitable for use in the invention.
                                                                                                                                                                                                                                                                    immunoglobulin E, allergy, thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SCPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Epitope, mimotope, himman, immunoglobulin B; 19E; C-epsilon-2 domain, allergic disease, immunoprophylaxis; immunotherapy, antiallergic, immunosupp;essive, vaccine, histamine release inhibitor; immunogen;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conjugate for use in vaccine for treatment of allergy, comprises disulfide bridge cyclized peptide and immunogenic carrier -

The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. poptides) to carrier vehicles

(e.g. racronolecules, polymers, dendifficates, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes protices described from or mirotopes of the finantians. Cepsilons proteins or mirotopes of the compositions of the invention are useful in the manuagibulin stopping and protein and interpretation of a performed to mirotope (antigen) to a protein so of the invention are useful in the manuagibulin stopping in the invention are useful in the manuagine of a performent for the invention are useful in the manuagine of a performance of the invention of a peptide epitope (antigen) to a protein so as to form an immission conjugate which may be able to raise a printeditive antibody response in an animal or buman patient. The Capsilon3/Cepsilon3/Cepsilon4 region of human 196.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A linkage comprising an immunogenic conjugate useful treatment of IgB mediated diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Immission, Namany 198, immissoylebulin By allergy, thic-ether linkage;

The present invention describes a peptide (1) comprising an isolated surface exposed group/epitop* (EI) of C-epsilon-2 domain (3) of immunoglobulin E 1985, or its ammotope. Asso described are: (1) an immunogen [11] (2) a vaccine [11] (3) a vaccine [11] (3) a vaccine [11] (4) tection allergies comprising [1], (2) a vaccine [11] (5) a peptide [2], (4) a planaceutical composition [6] (5) comprising [17], (5) a peptide [3], and a planaceutical composition [6] (6) an immunogen [7] area entitle [3] and [4] producing [4] (7), (6) an immunogen [7] area entitle [4] and [4] and [4] area entitle [4] and [4] and [4] area entitle [4] and [4] area entitle [4] and [4] and [4] area entitle [4] and [4] and [4] and [4] area entitle [4] and [4] and [4] and [4] area entitle [4] and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                             Peptides useful for treating, preventing and areliorating allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin {\rm E} .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide itsy deriver is mimotope of Cepsilon2 region of human 1g6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, inkage tochmilogy, conjugated compound, carrier vehicle, epitope, Cepsilon2, Cepsilon2, Cepsilon4, immunoglobulin E; ign mediated disease, antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ö

                                                                                                                                                                                                                                                                                                                                                                                              The prisent invention relates to conjugates suitable for use in raccines, where the conjugate compilses a disciplide bridge cycliser provide and an immunogenic carrier. The vactines can be used in the tradiffent of allergies. The present sequence is a cyclic peptide arminogen derived from human immunoglobulin E (19E) suitable for use in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Saps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Epitope, aimotope, human, immunoglobulin Ey 1989, Chepsilon & domino

The present invention relates to linkage methology full use in the conjugation of compounds (e.g. poptides) to carrier pehicles.

The quanticonologicals, polymers, proteins in gradies, to biclestical and immunological constructs. The invention privious amplitudes deliver to a perfect to a contract of proteins in a pharmaceutical composition of a variety. The protein for use in a pharmaceutical composition of a variety. The cinvention describes peptides derived form minimized by the Tractical Cepsitions of Described Forman armore the compositions of the invention are useful in the manufacture of a composition of minimized the composition of a composition of a peptide epitique (article of a lower for controlled conjugation of a peptide epitique) article to a protective antibody response in an anima, or human patherit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The prosent invention relates to conjugates sattable for use in vaccines, where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic currier. The vaccines can be used in the treatment of
                               an immunogenic conjugate useful ireathens of 138
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Immunoaen, human, 195, immunoglotolin Ep allenayo tano erber inokageo
